

PROJECT COMPLETION LETTER

Dear

Mohamed Hussein Ragab Farghali

I am pleased to announce the successful completion and deployment of the following projects:

- **Teeth Disease Classification**

- This project focused on developing a machine learning model to classify various teeth diseases. We utilized a comprehensive dataset and implemented advanced algorithms to achieve high accuracy in disease detection. The model has now been successfully deployed, enabling healthcare professionals to enhance diagnosis and treatment plans.

- **Flood Rapid Mapping with Optical Data (Image Segmentation)**

- This project involved using optical data for rapid mapping of flood-affected areas. We implemented image segmentation techniques to identify and analyze impacted regions effectively, facilitating timely responses to natural disasters. The deployment of this system allows for real-time mapping and monitoring of flood conditions.

- **Shop Lifting Detection**

- In this project, we developed a system to detect shoplifting incidents using computer vision techniques. The project aimed to enhance security measures within retail environments by accurately identifying suspicious behaviors. The deployed solution is now operational, providing retailers with valuable insights to improve security.

The completion and deployment of these projects demonstrate our commitment to advancing technology and providing solutions that address real-world challenges. We are proud of the outcomes and the valuable insights gained throughout the process.

Sincerely,

Ahmed Sameh
